

## SGT ENVIRONMENTAL POLICY

Since 1981, SGT has been able to develop and to meet its customer requirements thanks to innovated and customized solutions and also thanks to the expertise and the involvement of its employees.

Our goal is to become a key player in the preform manufacturing.

SGT is committed to run its business in a responsible, environmentally sound and sustainable manner. We respect the environmental laws as a CEPI (Classified Environmental Preservation Installation). Our aim is to achieve continuous improvement in our environmental performance.

In order to reach our targets, SGT is focused on 3 action lines:

### 1. Prevent and limit waste production :

- ▶ We minimize or recycle as much as possible our waste and we are expecting to reduce our annual share of common industrial waste by 20% within 2022.
- ▶ We also recycle production scraps.
- ▶ We encourage local exchanges and share good practices at the “Environmental Club” of the Chamber of Commerce and Industry of Nantes & Saint-Nazaire.
- ▶ We are member of the Clean Sweep movement.

### 2. Reduce energy consumption :

- ▶ We invest in the latest generation of energy-efficient equipment in order to reduce our annual electricity consumption of 5% and to limit noise pollution: cooling system, dryers, injection molding machines.
- ▶ We renew our lighting with low-energy lighting consumption.

### 3. Save resources :

- ▶ We have invested in a RPET production plant in order to control the quality of our recycled raw materials and to optimize supply distances through local sourcing.
- ▶ We have been working for several years with our customers to incorporate recycled material in our preforms in order to meet the objectives of the European regulation (SUP) and thus have less impact on fossil resources.
- ▶ We develop eco-designed products.
- ▶ We have been committed for many years to make our products lighter.
- ▶ We reuse the packaging of finished products which are cardboard boxes and, for some of our customers we have set up returnable packaging in metal or plastic.
- ▶ We have located a new production site in the Eastern of France in order to reduce delivery distances for some of our customers.

Financial and material resources are mobilized to promote our commitments among our employees; by providing the necessary training and support to enable them to implement this environmental policy.

M. Frédéric MIGNOT,

Chairman
